

Community Air Monitoring Plan

Appendix B

California Statewide Mobile Monitoring Initiative (SMMI)
Methodology for Allocation of Broad Area Monitoring Miles

July 1, 2025

The Statewide Mobile Monitoring Initiative is part of California Climate Investments, a statewide initiative that puts billions of Cap-and-Trade dollars to work reducing greenhouse gas emissions, strengthening the economy, and improving public health and the environment – particularly in disadvantaged communities.

Methodology for community mileage allocation

A customized prioritization metric for each census tract across all CNCs was defined to rank CNCs according to various socioeconomic and environmental indicators. This prioritization method was defined in consultation with the PEG.

- Aclima proposed a customized weighting of individual environmental and socioeconomic indicators relevant to the SMMI monitoring methodologies (including some in CalEnviroScreen plus others). The weighting was determined by a survey of PEG members, who assigned weights to each available indicator.
- Survey Score Normalization: The Max/Min method was used to normalize the survey responses from PEG members to a scale of 0 to 1. This ensured that individual respondents' tendencies to give consistently higher or lower ratings did not skew the overall results.
- Indicator Weighting and Scoring: The normalized raw survey results were used to create weighting factors for each indicator. These weighting factors are shown in Table B.1 below. For each census tract, a mileage allocation score is derived by converting each indicator value into a percentile rank across all census tracts contained in the CNCs. This rank is multiplied by its corresponding weight, summing across all indicators, and normalizing to a value between 1-100. The indicators were taken from CES 4.0 and two additional non-CES indicators were added: the density of [AB2588 Air Toxics Hot Spots](#) and the density of large permitted sources, both measured as the number of sources per unit road length in census tracts. Some of the sources in the inventory had no emissions reported; these sources were first removed before calculating the density of sources.
- Final Score Calculation: The weighted scores for each indicator were summed for each census tract. This summed result was then normalized to a scale of 1-100 to create a PEG mileage allocation score for every census tract contained within the 64 CNCs.

Individual census tracts within CNCs were then successively selected based on this customized ranking until the total road miles available for monitoring in each air district was exhausted. The road mile length of the census tracts selected is added up for each CNC, and that total is the number of miles available for monitoring for that CNC.

The total number of available road miles were distributed across air districts according to the proportion of population contained within each of the 5 air districts containing the 64 CNCs (Imperial County, South Coast, San Joaquin Valley, Sacramento Metro, and Bay Area). This resulted in 100% of the road miles for CNCs in Sacramento, San Joaquin, and Imperial County Air Districts being allocated, because the proportion of these air districts population is higher than their proportion of the CNC road miles compared to that over all CNCs. For the Bay Area and South Coast CNCs, there were more miles present within the CNCs than there were miles available, and therefore a method was required for allocating the remaining miles among individual CNCs.

Table B.1: Indicator weights for prioritization of CNCs.

Indicator	Weight	Cal EnviroScreen 4.0 / Aclima Description
PM2.5	85%	Percentile of the annual mean concentration of PM2.5
Air Toxics hotspots	83%	Number of 2022 AB2588 Toxics HotSpot sources per unit road length

Large Permitted Sources	82%	Number of Large permitted sources per unit road length
Pesticides	80%	Percentile of total pounds of select pesticide ingredients used in production of agriculture per square mile
Toxic Releases	80%	Percentile of toxicity-weighted concentrations of modeled chemical releases to air from facility emissions and off-site incineration
Asthma	80%	Percentile of ED visits for asthma per 10,000 residents per year, spatially modeled and adjusted for age
Poverty	79%	Percentile of percent of census tract population living below two times the 2015-2019 federal poverty level
Diesel Particulate Matter	75%	Percentile of Spatial distribution of gridded diesel PM emissions from on-road and non-road sources 2016 (tons/year).
Cardiovascular Disease	70%	Percentile of ED visits for acute myocardial infarction per 10,000 residents per year, spatially modeled and adjusted for age
Low Income	70%	Percentile of the percent of households in a census tract that are both low income and severely burdened by housing costs
Linguistic isolation	59%	Percentile of the percentage of limited English-speaking households per census tract
Traffic density	58%	Percentile of traffic impacts, or traffic density, in vehicle-kilometers per hour per road length, for all roads within 150 meters of the census tract boundary
Low birth weight	58%	Percentile of the percent of low birth weight births per census tract
Unemployment	51%	Percentile of the percentage of census tract population over the age of 16 that is unemployed and eligible for the labor force
Education	50%	Percentile of the percentage of census tract population over age 25 with less than a high school education
Ozone	49%	Percentile of mean daily maximum 8-hour ozone concentration at the census tract level, during the summer (May-October)

Table B.2: Road miles assigned to CNCs. Note that final broad area mileage of each CNC may differ from what is allocated here. These numbers are based on residential and major road types only. Roads considered as Highways (including on/off ramps) will also be monitored, but are not factored into the mileage allocations.

CNC Name	Total allocated CNC miles
Bloomington, Fontana, Rialto	588
Buena Park, Anaheim, Fullerton, Orange	681
Central and East Riverside, Rubidoux	280
Chiriaco Summit	0.4
Colton, Grand Terrace, San Bernardino (southwest)	743
Compton, Rancho Dominguez, Willowbrook, Lynwood	406
Corona, Temescal Valley	214
Delano	131
East Contra Costa County (includes Pittsburg Bay Point)	259
East Palo Alto	43
El Monte, South El Monte, Avocado Heights, Hacienda Heights, La Puente (west), Bassett	392
Fairfield	368
Fairmead	36
Florin (Community C)	75
Gardena, Alondra Park, Lawndale	182
Gilroy	90
Greater Oakland	188
Hayward (parts)	50
Inglewood, Hawthorne, Westmont, Vermont	288
